

Carbon Reduction Plan

Our commitment to achieving Net Zero emissions by 2050.

The climate change is one of the greatest challenges of our time and has a significant impact on life and health. As a healthcare company, we understand the urgency to take action against climate change.

For us, improving people's lives goes hand in hand with preserving the planet. We are involved in the "SME Pact Alliance" as well as the "Race to Zero" initiative of the United Nations.

We know we can have the greatest impact by building a road to carbon neutrality by 2030, and net-zero emissions by 2050, by improving the environmental profile of our products, limiting its environmental footprint and opting for circular solutions. To reduce the carbon footprint, the company acts on several levels: improving the energy efficiency of sites, decarbonizing energy, promoting the use of low-carbon energies for projects and the purchase of electricity from certified renewable sources, implementing a more environmentally friendly mobility policy for sales teams, and improving the transport of products by promoting rail and maritime routes.

Finally, we are continuing our efforts on waste management so that, by 2030, more than 50% of waste is reused, recycled or recovered.

We are already making excellent progress with our plans; we have been awarded the 'Ecovadis Sustainability Rating' Silver Medal and we have appointed industry experts 'Sami' (<https://www.sami.eco/en>) to accelerate the process of our data collection, consolidation of information and ultimately building our road-map to achieve our carbon net zero target by 2050.
